Calibration Service

InstruLogic Corporation specializes in on-site calibration of process control instrumentation. Our technicians perform complete solutions for calibration of process control instrumentation, electrical and mechanical, to meet all system requirements.

Time-in-service, temperature, humidity, and environmental exposures can all affect your measurement accuracy. The costs of having inaccurate equipment are high: poor product quality, downtime, product loss, and the inability to meet standards.

Calibration and service performed at regular intervals keeps your instruments running and operating at their optimum saving you emergency maintenance costs, and the costs associated with unscheduled downtime.

Specializing in Calibrations for Process Control Instrumentation

- Flow
- Dissolved Oxygen
- PH Connectivity
- Level Meter
- Turbidity
- Pressure Sensors
- Chlorine
- Many Others
