Factory Automation Services

InstruLogic Corporation is a leading manufacturing consulting and system integration firm specializing in productivity improvement. We merge product and process control systems into a knowledge-based plant optimization framework.

For our large and small clients alike, our integrated Manufacturing Execution Systems (iMES), Advanced Control, and SCADA systems are interconnected into highly reliable, interactive processes that accurately aggregate decision-support information into our client's business applications.

Using a systematic approach, we clearly map out a low risk migration path for structuring and converting automated plant data into decision-support information through our proven automation framework.
