Measurement and Instrumentation

InstruLogic Corporation, through an experienced design and engineering staff, will incorporate sensor instrumentation, signal conditioning, digital signal processing, and general software engineering specific to your needs.

InstruLogic Corporation provides customized and state of the art hardware and software solutions for a variety of applications.

InstruLogic Corporation provides advanced, accurate and reliable instruments to measure or analyze temperature, flow, pressure and electromechanical variables. From transmitters and sensors, to positioners, recorders and controllers, these devices compliment our automation systems to provide a wide range of capabilities in process control.

Instrumentation

- Flow
- Pressure
- Temperature
- Analytical
- Calibration
- Communication
- Controllers & Recorders
- Fluid Components

Services

- Installation
- Integration
- Repair & Maintenance
- Consultation
- Training
- Customer Support
